

- Hey 🙌 Great to have you here!
- May I have your name please?

User response

- Welcome name!
- I will be helping you to assess the quality of the dataset to gather high quality requirements for your system.
- Having trust in your data is crucial because it impacts the effectiveness of your decisions and any requirements driven from this data.
- Take some time to get familiar with the data 🔍 and let me know when you're ready!

User response

- Do you think this dataset is relevant to what you are looking for? In other words, will it help you in understanding your users and system requirements better?

User response

- How up-to-date is this data? Could some of the data be outdated or no longer reflect current realities?
- Also, look for any change in behavior over the years. Such factors would affect the importance of some records over the others. 🔍

User response

- Great job checking the dataset's time coverage – it ensures your insights remain relevant and accurate.
- Do not also overlook duplication in the data. Multiple variations of the same record may provide skewed analytical results and incorrect insights.

User response

- Is the data complete?
- Any missing values or empty fields? Does it have enough detail to be useful?
- Complete, detailed data gives you a strong foundation.

User response

- Quick heads-up – data might be there but still wrong.
- Do the values make sense? Do reviews reflect what users meant?
- Inaccurate data leads to misleading results.

User response

- Did you know 41% of US companies say inconsistent data is their biggest challenge? It costs them a lot 💡
- Consistency is a key for trusted decisions. Look out for contradictory values or different formats for similar data.

User response

- Watch out for bias 🔍 The dataset might overrepresent certain user groups or lean too positive or negative . This can skew your insights, so keep an eye out.

User response

- Is there enough data to draw reliable conclusions?
- Too little data might lead to weak or misleading insights, so always assess if the dataset size is sufficient for your analysis goals.

User response

- Great work today! 🙌
- Remember, early detection of data issues saves huge costs later. IBM estimates bad data costs the U.S. \$3.1 trillion each year in fixes and lost productivity.
- Feel free to spend more time investigating the data.
- Let me know when you're done with the review.
